

VLBI Observations with ALMA

#FirstPictureOfBlackHole Taking the **first picture** of a **black hole**

At the center of the Milky Way, there is a **supermassive black hole** known as **Sagittarius A***.

It weighs **4 million times the mass of the Sun!**

2 major international projects joined different telescopes from the **south pole to Hawaii and Europe**, passing by **ALMA**, to create virtual observatories the size of the Earth: **The Event Horizon Telescope (EHT)** and the **Global mm-VLBI Array (GMVA)**.

ALMA and its 66 antennas are the most sensitive component of both projects, multiplying sensitivities **10 times**.

In search of the impossible!

Russia's RadioAstron space observatory

The RadioAstron observatory with an unprecedented high resolution capability will make it possible to observe remote objects in space

Parabolic antennas

- Diameter: 10 meters
- Comprises 27 carbon-plastic "petals"

Broad-beam antennas

Focal module

This is the first Russian orbital radio telescope

It will study:

- Galaxy nuclei
- Black holes
- Neutron stars
- Interstellar plasma clouds
- The Earth's gravitational field
- And many other objects and phenomena in the Universe

Ordered by: Federal Space Agency

Chief contractor: Lavochkin Research and Production Association

Scientific equipment developed by: Astro Space Center of the Russian Academy of Sciences Lebedev Physics Institute.

The RadioAstron observatory was launched on July 18, 2011.

Active service life: At least five years

RIA NOVOSTI © 2011

The Highest Angular Resolution Ever !!
World Record

~ 10 μ as (0.000 000 028 deg)

Highly elliptical orbit

- Apogee: 330,000 kilometers
- Perigee: 600 km
- Orbital period: 8.2 days

ALMA vs GMVA

ALMA	vs	GMVA
66	# of Antenna	20
35 – 950GHz 1cm-0.3mm	Frequency Wavelength	(43), 86GHz 7mm – 3.5mm
15m - 16km	Baselines	~200km – 10,000km
~5mas@0.3mm	Max Resolution	~0.05mas@3mm
8GHz BW	Bandwidth	0.5GHz BW
Full Stokes	Polarization	Full Stokes

※ GMVA sensitivity

$$\Delta S = \text{SEFD} / [\eta_s \cdot (2 \cdot \Delta\nu \cdot \tau_{\text{ff}})^{1/2}] \quad (\text{Jy})$$

- 0.90 mJy/hr (Europe+VLBA)
- 0.49 mJy/hr (Europe+VLBA+GBT)
- 0.22 mJy/hr (Europe+VLBA+GBT+ALMA)

※ Angular Resolution

ALMA: 15km @86GHz $\rightarrow \theta \sim 100\mu\text{as} \times 666$
 ALMA: 15km @230GHz $\rightarrow \theta \sim 30\mu\text{as} \times 666$
 GMVA: 10000km @86GHz $\rightarrow \theta \sim 100\mu\text{as}$
 EHT: 10000km @230GHz $\rightarrow \theta \sim 30\mu\text{as}$

BW & Recording Rate

GMVA:

- 128MHz BW, 2Gbps

EHT:

- 4GHz BW, 32Gbps

Telescopes contributing to the EHT and GMVA observations of Sagittarius A. The connected telescopes simulate a telescope equivalent to the dimensions of the whole western hemisphere of the Earth. Credit: ESO/O. Furtak*

Phasing ALMA for VLBI

- ALMA Phasing Project (APP) (2011~2016)
 - Phasing-up all ALMA telescopes for (sub)mm-VLBI as one single VLBI station
 - Large increase in Sensitivity (by x10) → improve image fidelity
e.g., 64x12m → 96m eff. aperture
 - Increase resolution (by x2)

mm-VLBI with ALMA

Fish et al. (2013)

FIG. 1.— The (u, v) coverage of sources at $+20^\circ$ (left) and -20° (right) declination. The top row shows the global VLBI baseline coverage at 7 mm, and the bottom row shows the coverage at 3 mm. Baselines to ALMA are indicated in red. ALMA provides substantial improvement in the north-south coverage of global VLBI arrays, especially at 3 mm and for southern sources.

1st VLBI Observations with ALMA

- 1st observation: April 2-15 2017
 - April 2-4: GMVA (86GHz, 3mm)
 - April 5-11: EHT (230GHz, 1.3mm)
 - ✂ 8 telescopes (62 hrs ALMA time)
 - 4PB raw data
- 2nd observation: April 15-27 2018

mm-VLBI with ALMA: General Science Cases

- Imaging EH of BH: SgrA*
- Testing GR
- Origin of AGN jets and jet formation
- Cosmological evolution of galaxies and BHs, AGN feedback
- Galactic masers (Star Formation, Evolved Star)
- Pulsars, neutron stars, and X-ray binaries
- Extragalactic emission lines
- Absorption lines in distant galaxies and study of their ISM
- Testing cosmology and fundamental physical constants
- Astro-chemistry

Motivation:

AGN Study: mm-VLBI with ALMA

What are the physical processes acting at the centers of Quasars and in other Active Galactic Nuclei ? One needs to directly image the regions near the central Black Hole and study how the powerful radio-jets are launched and accelerated.

mm- and sub-mm VLBI with ALMA offers micro-arcsecond scale resolution and will help to answer the following questions:

Assymmetric emission around a rotating Black Hole ?

The Black Hole:

A GR-MHD dynamo ?

rotating black hole (Kerr solution)

front beaming (enhanced emission)

gravitational redshift

lensed disk segment

event horizon

back beaming (reduced emission)

Magnetically driven jet launching ?

Jet rotation/precession due to frame dragging or binary BH?

Origin of Gamma-rays in AGN jets ?

ALMA

SiO ($v=1,43 \text{ GHz}$)

H₂O (22 GHz)

H₂O (232 GHz)

H₂O (321 GHz)

Hirota et al. (2012, 2017)

- New Probes of YSOs and AGBs
- New maser line detection with ALMA
 - H₂O at 232GHz
 - H₂O at 321GHz
- double-peaked profile similar to SiO
 - tracing hotter/dense gas than H₂O at 22GHz?
 - mm/submm VLBI is essential to study dynamics & excitation

Masers in AGBs

AGN Torus from Absorption Lines with KVN

❖ HCN (1-0) associated with the AGN torus (Sawada-Sato+ 16)

- ✦ High opacity localized on the receding jet.
- ✦ Ongoing infall of HCN clumps to SMBH.
- ✦ Yielded physical properties of the torus.
 - $N(\text{H}_2) : 10^{24}\text{-}10^{25} \text{ cm}^{-2}$
 - Infall rate : $\sim 0.05\text{-}0.5 M_{\text{sun}}/\text{yr}$

VLBI with ALMA: Proposal Preparation

Strategy

- ALMA participate in open-access VLBI networks
- ALMA-VLBI proposal is assessed in competition with other ALMA proposals
- ALMA-VLBI data products will become public after some proprietary period

Proposals

- ALMA bands 3 and 6 are available
 - GMVA 3mm, EHT 1.3mm
- ALMA+GMVA : PIs must submitted a proposal to the GMVA by 1st Feb. in addition to their ALMA VLBI proposal
 - stress why ALMA is essential !!
- Notes:
 - No Large Program and DDT proposals
 - At present, up to 37 12m antennas in the phased array
 - Usually ALMA-VLBI campaign will be carried out in April
 - ✂ proposal deadline issue btw GMVA and ALMA

EHT Workflow

EHT: Korea Participation

- EHT: Starting from early 2010
- Official participation of Korea from mid-2017 under the EAO
 - supporting JCMT VLBI operation and joining S&T WG
