

# 6<sup>th</sup> 2022 ALMA SUMMER SCHOOL

## Self-Calibration of Molecular Gas Region G10.32

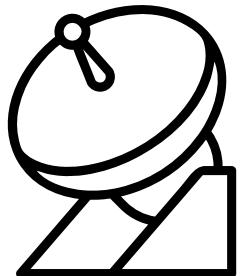

Group 1

**Ji-hyun Kang(adviser), KASI**

Shanghuo Li, KASI.

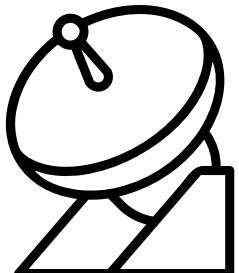

Jae-Hong Jeong, Seoul National Univ.

Jaebeom Kim, Sejong Univ.

# Introduction

1. Imaging with no self-calibration on MS .
2. Self-calibration on MS using only spw 0.
  - a. Phase and amplitude calibration and imaging.
  - b. Only phase calibration and imaging.
3. Self-calibration on MS using spw 0,1,2,4.
4. Comparing results of 2 and 3 statistically.
5. Analysis kinematics component of G32.10 using the moment map.

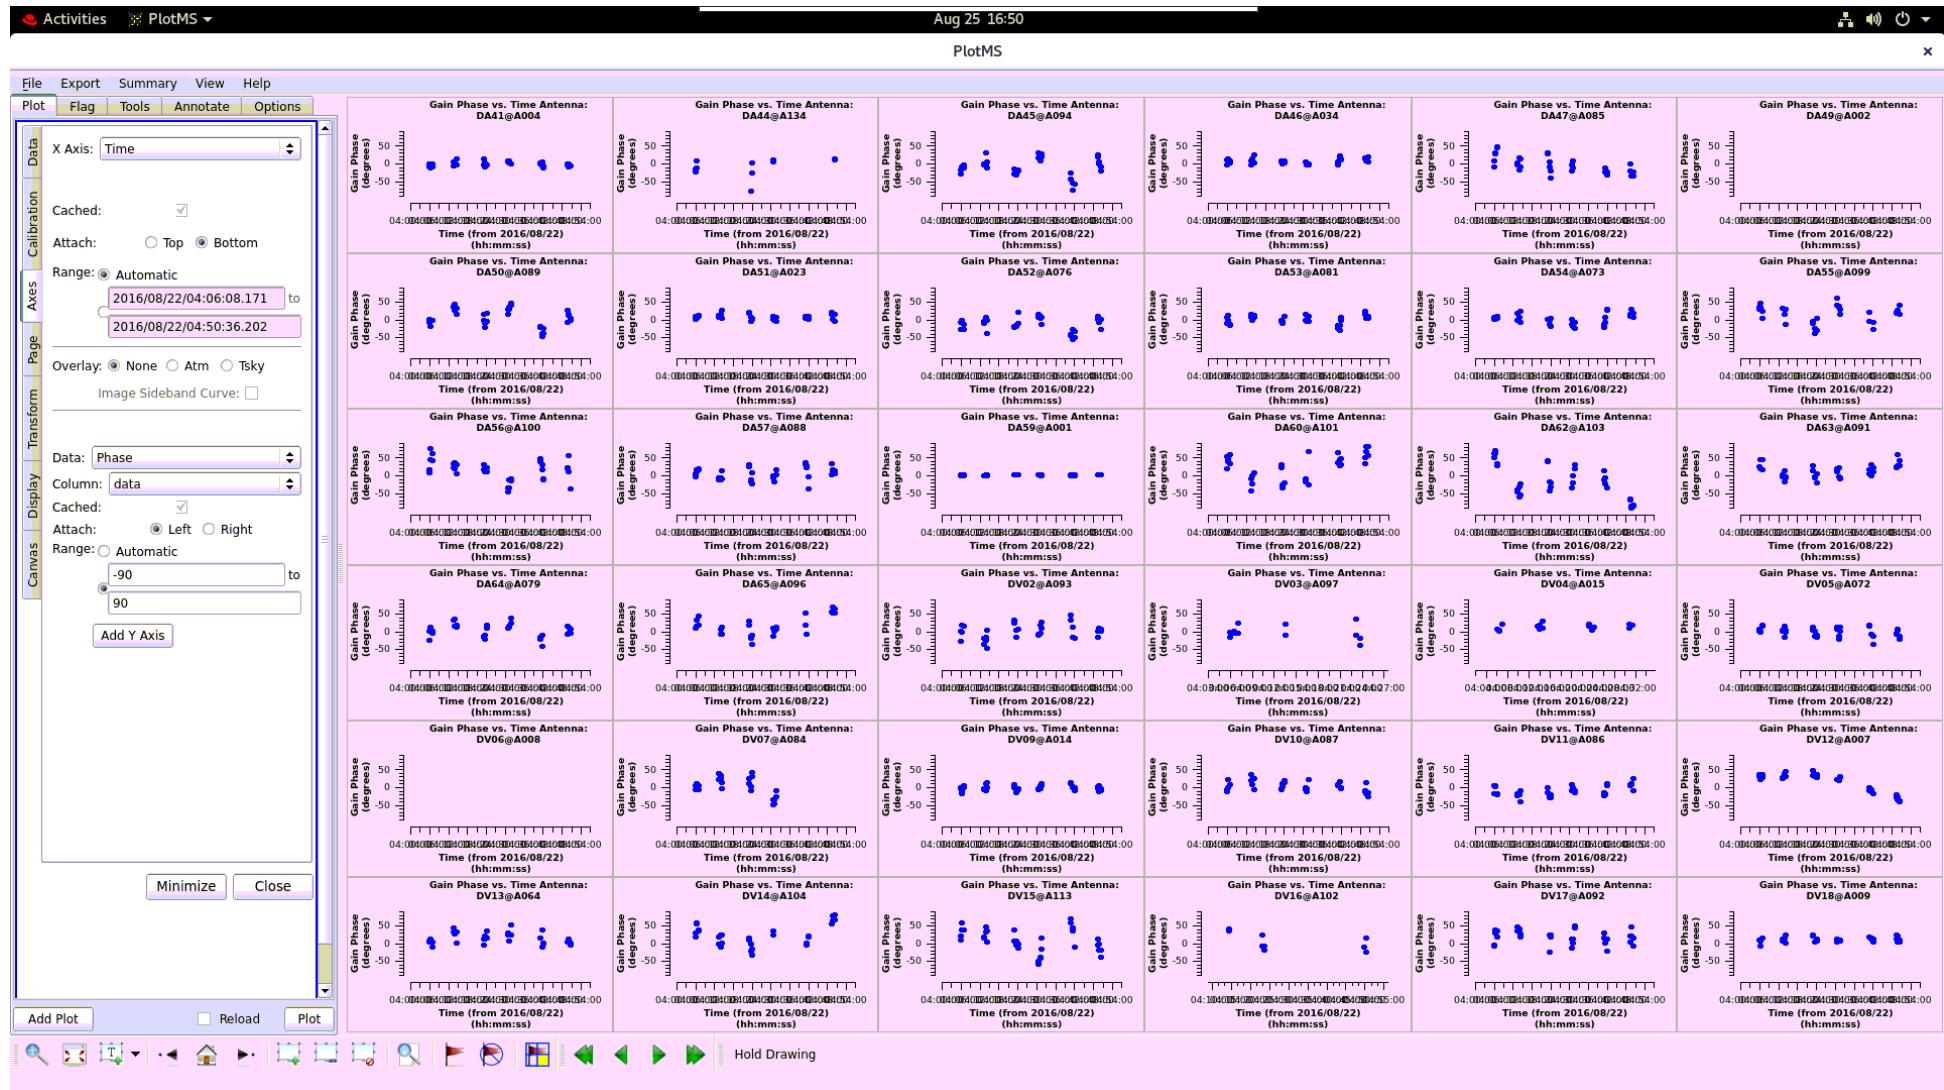

# Continuum Images applied the Phase+Amp Calibration

## 1. Phase calibration

Images	S/N	$\sigma_{\text{self}}$	$S/N_{\text{self}}$
Image0 (interactive=False)	63.3	-	-
Image0 (interactive=True)	91.6	3.5Jy	6.3
Image1	115.0	5.0Jy	4.6
Image2	114.3	-	-
Image0_ap	133.3	-	-

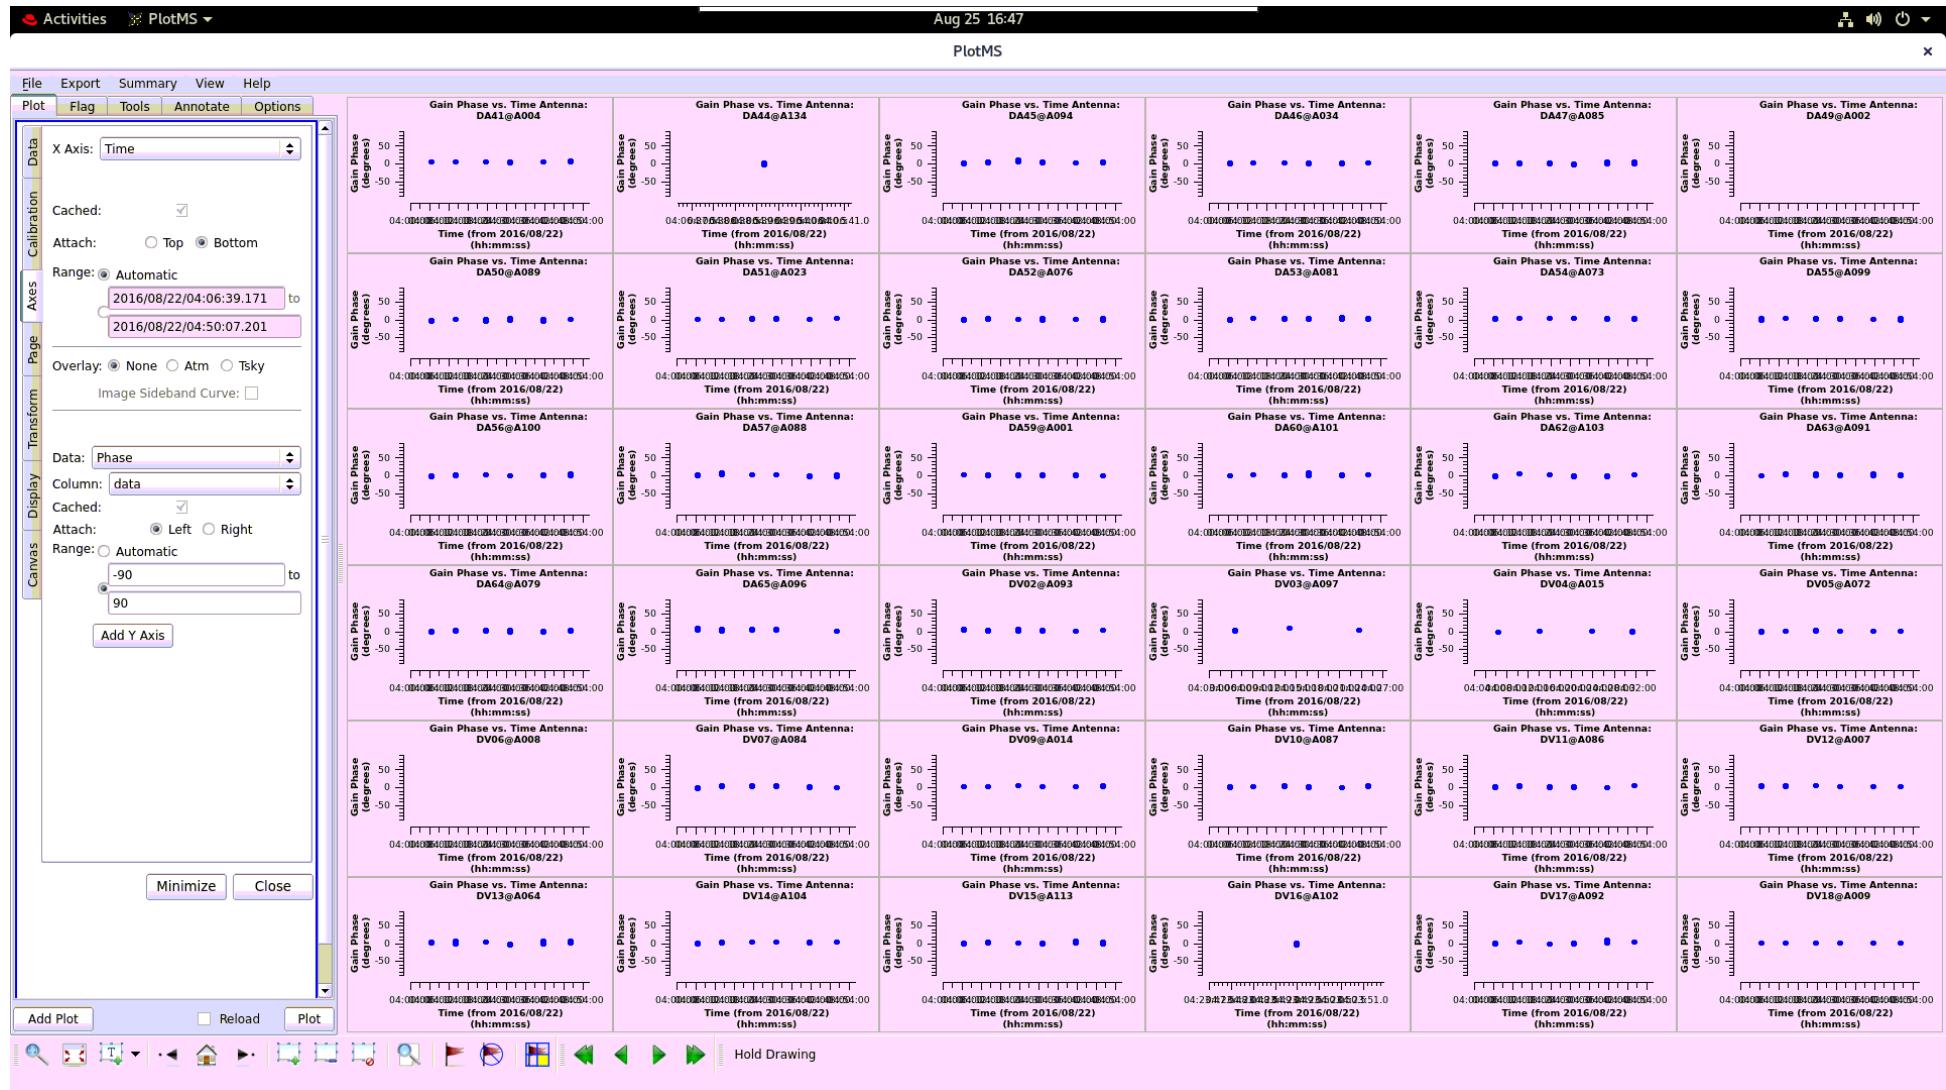

# Continuum Images applied the Phase+Amp Calibration

## 2. Phase calibration table(solint=30s) : phase fluctuation

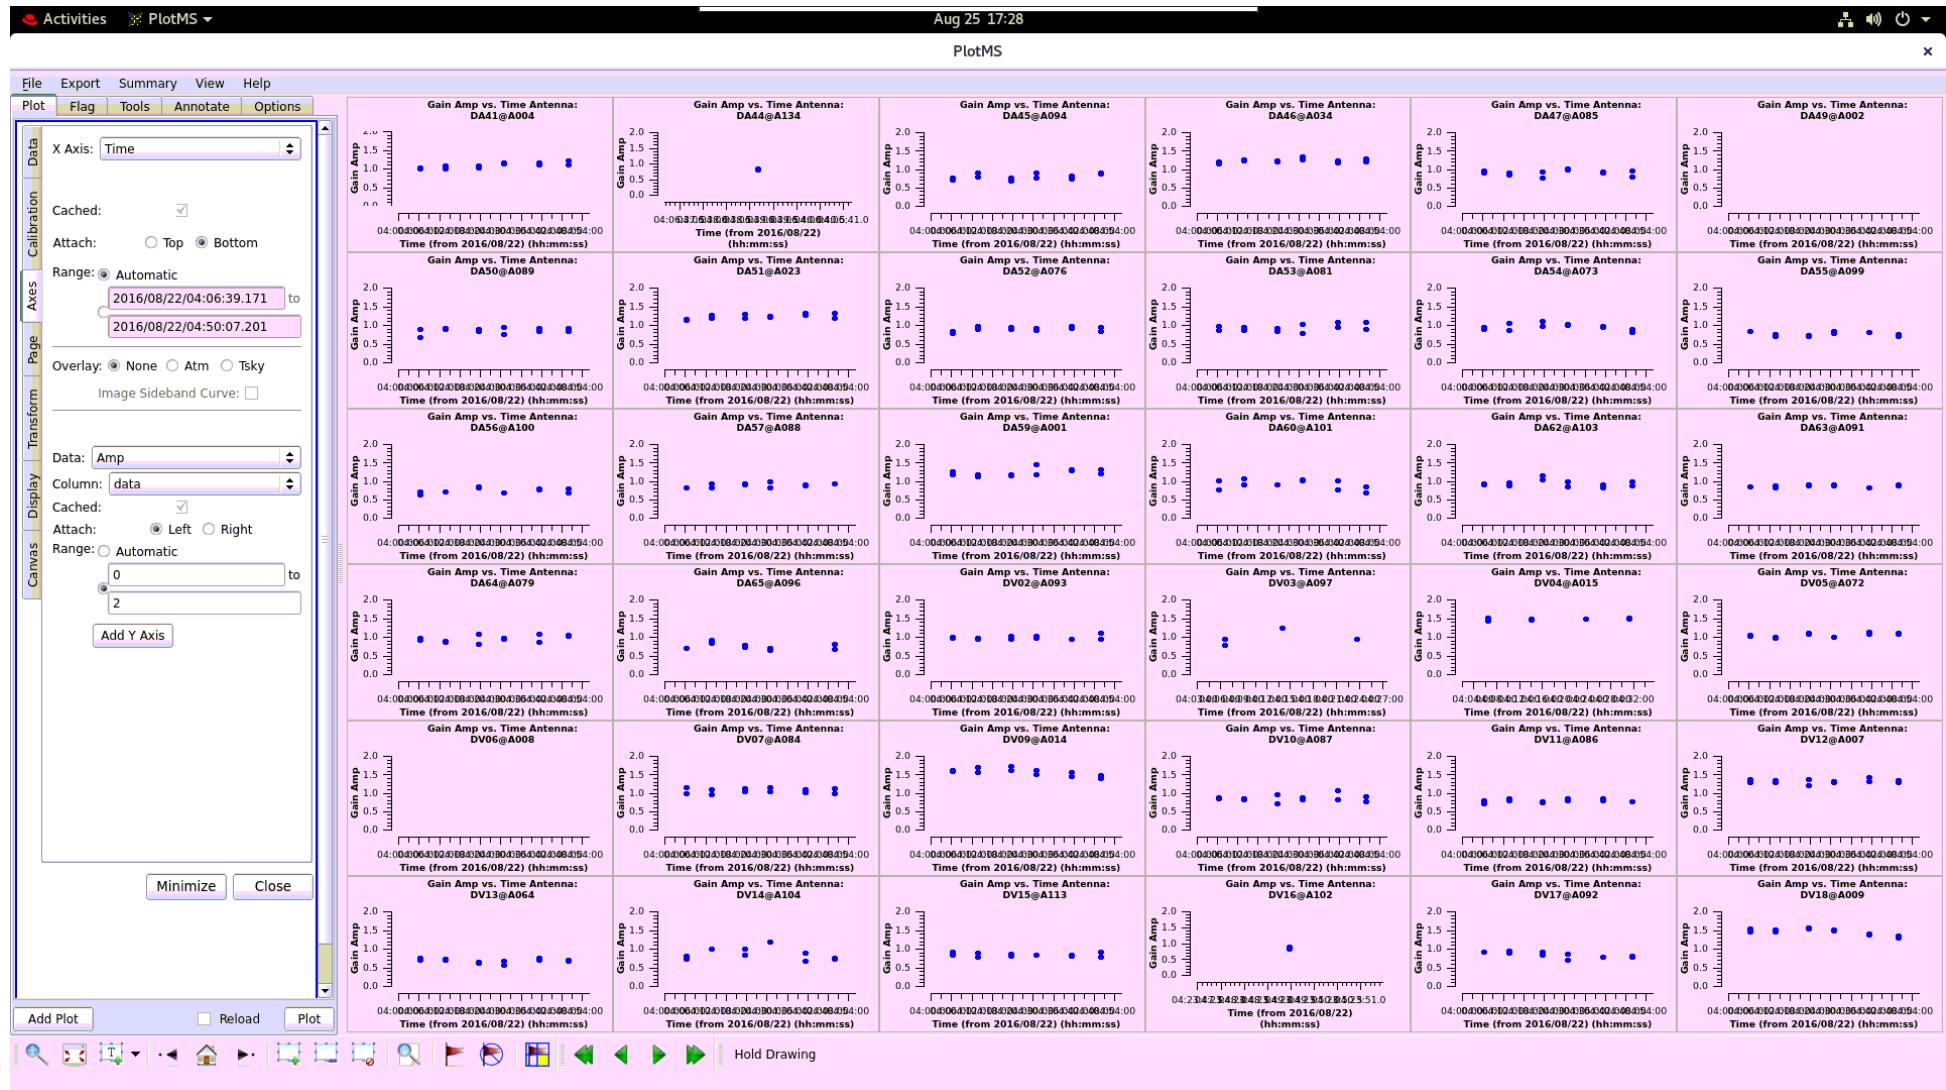

# Continuum Images applied the Phase+Amp Calibration

## 3. Amplitude calibration table : phase fluctuation

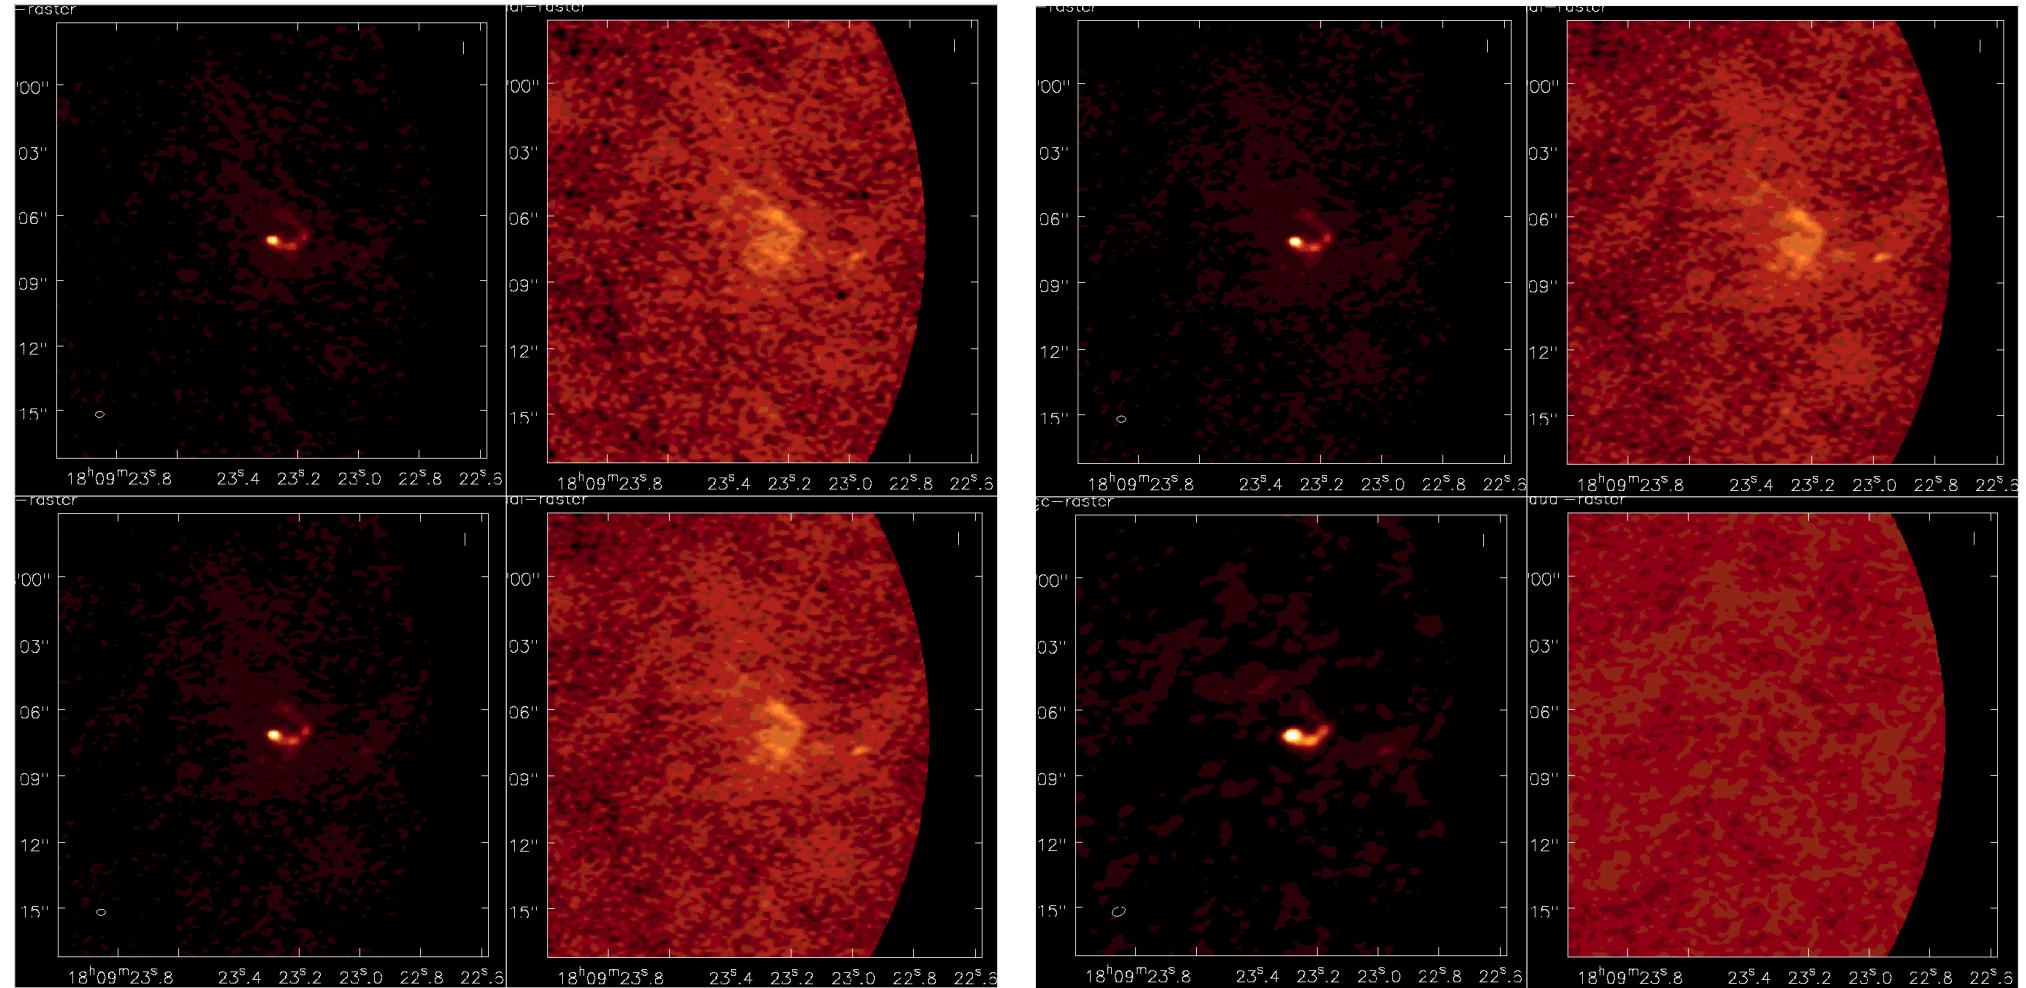

# Continuum Images applied the Phase+Amp Calibration

## 4. Amplitude calibration table : amplitude fluctuation

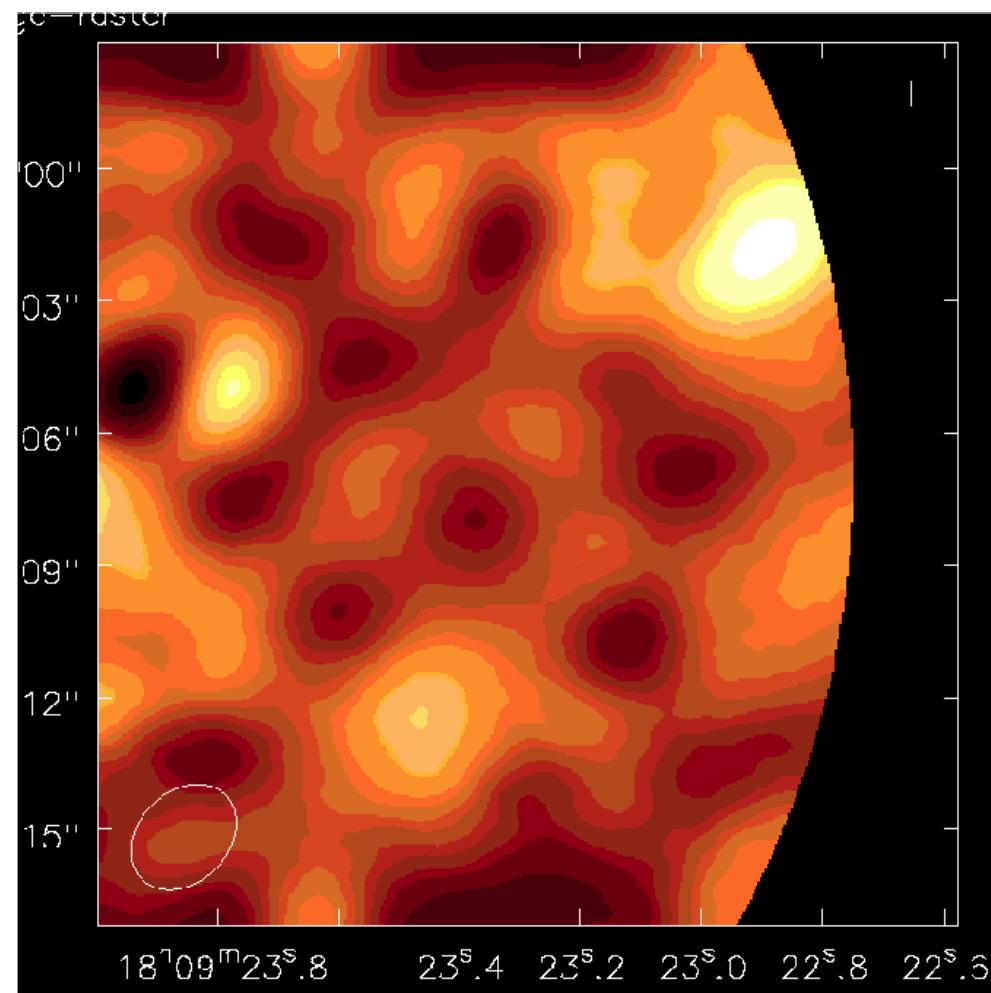

# Line Images applied the Phase+Amp Calibration

## 5. Phase+amp calibration continuum images

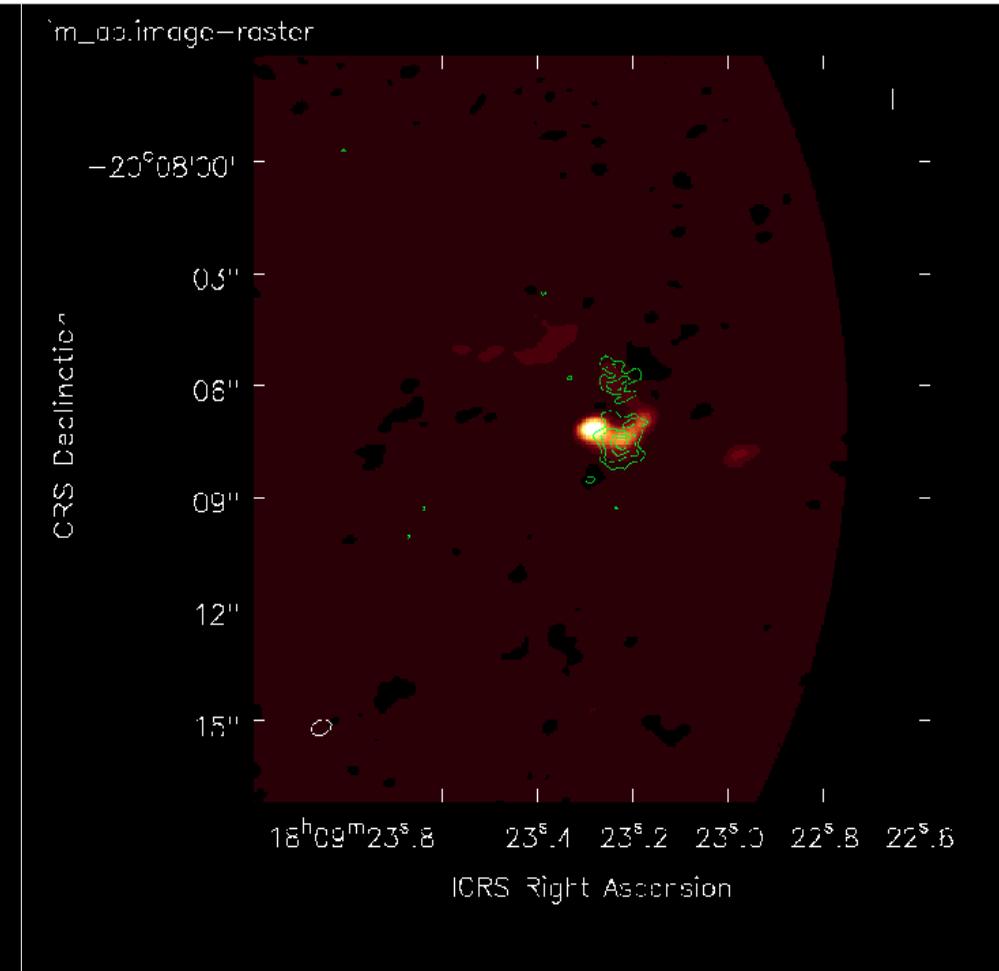

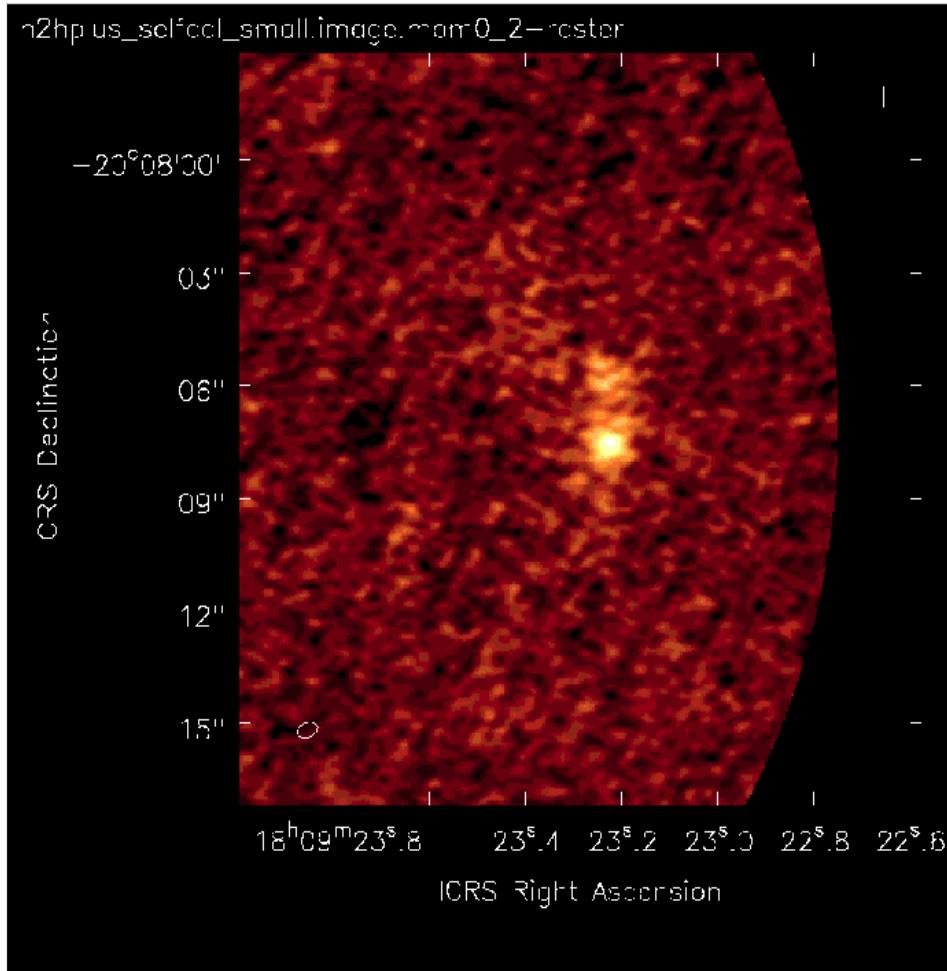

# Continuum Images applied the Phase+Amp Calibration

6. If we apply amplitude gaincal solint='30s'..?

# Line Images applied the Phase+Amp Calibration

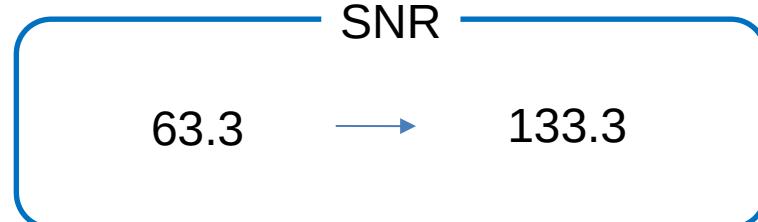

## 7. Phase+amp calibration line images

# Continuum Self-Calibration: Different Trial

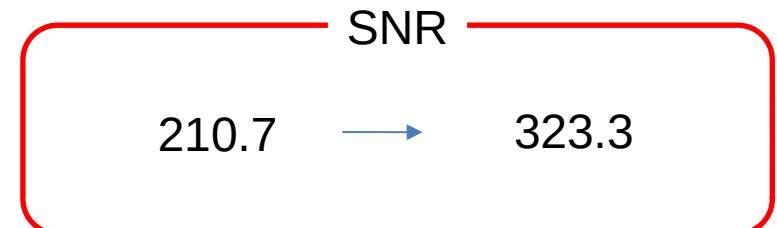

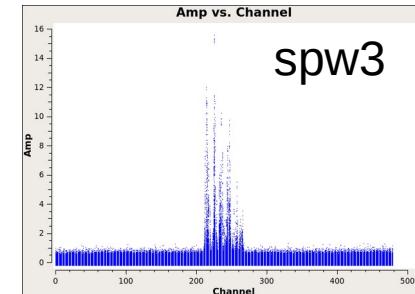

## Before

- SPW: 0
- Phase Calibration: twice (solint inf & 30s)
- Amplitude Calibration: Once

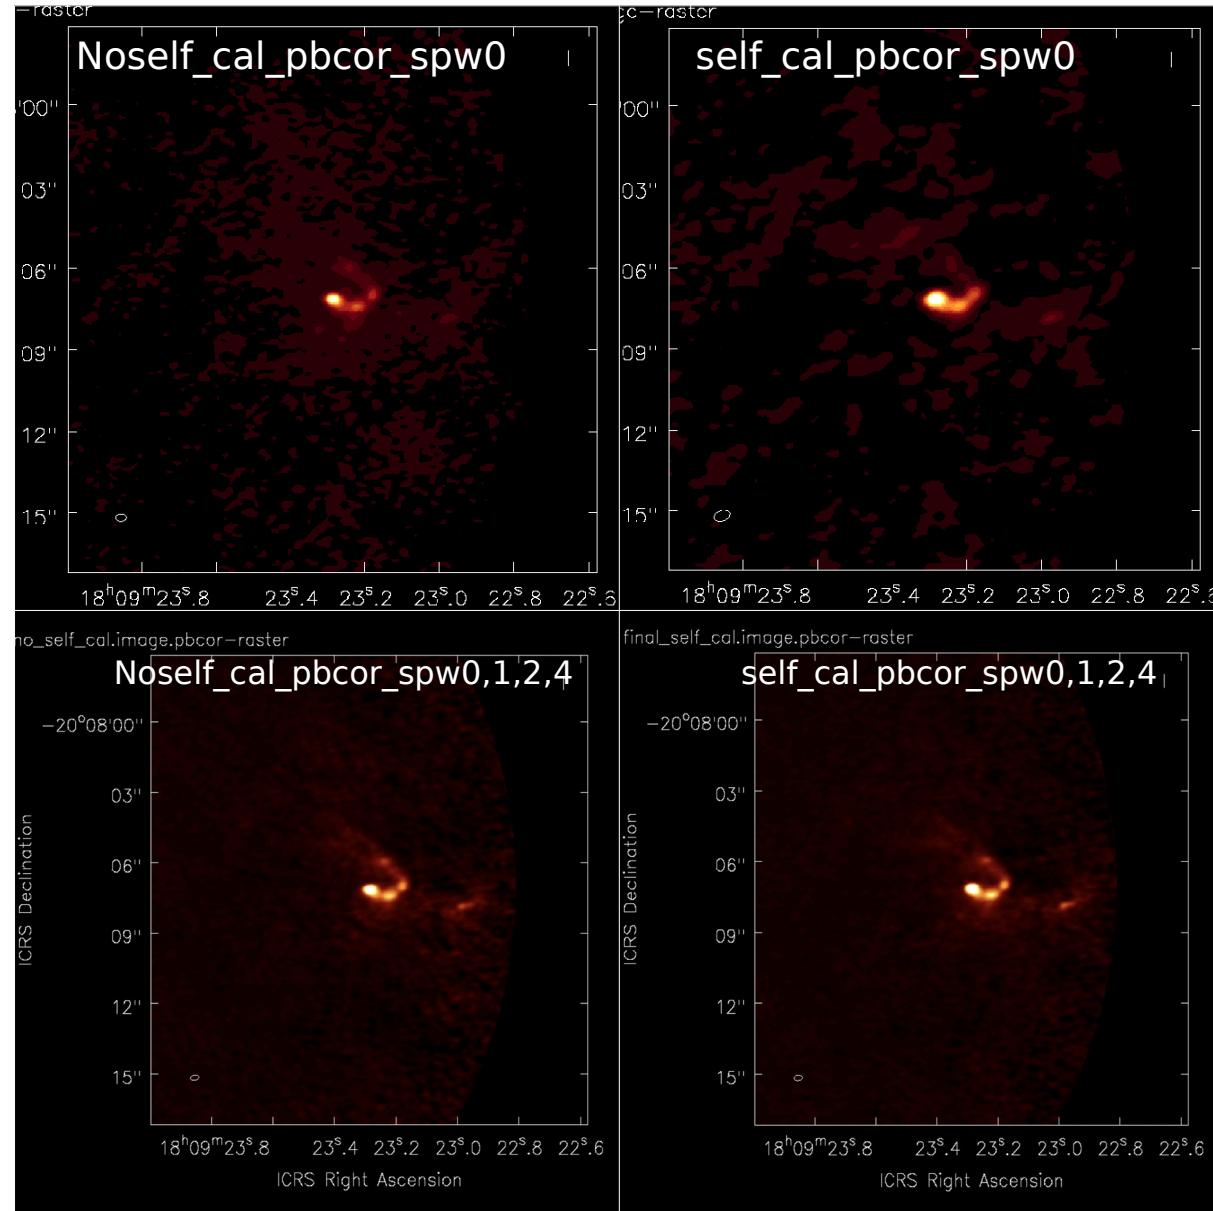

## After

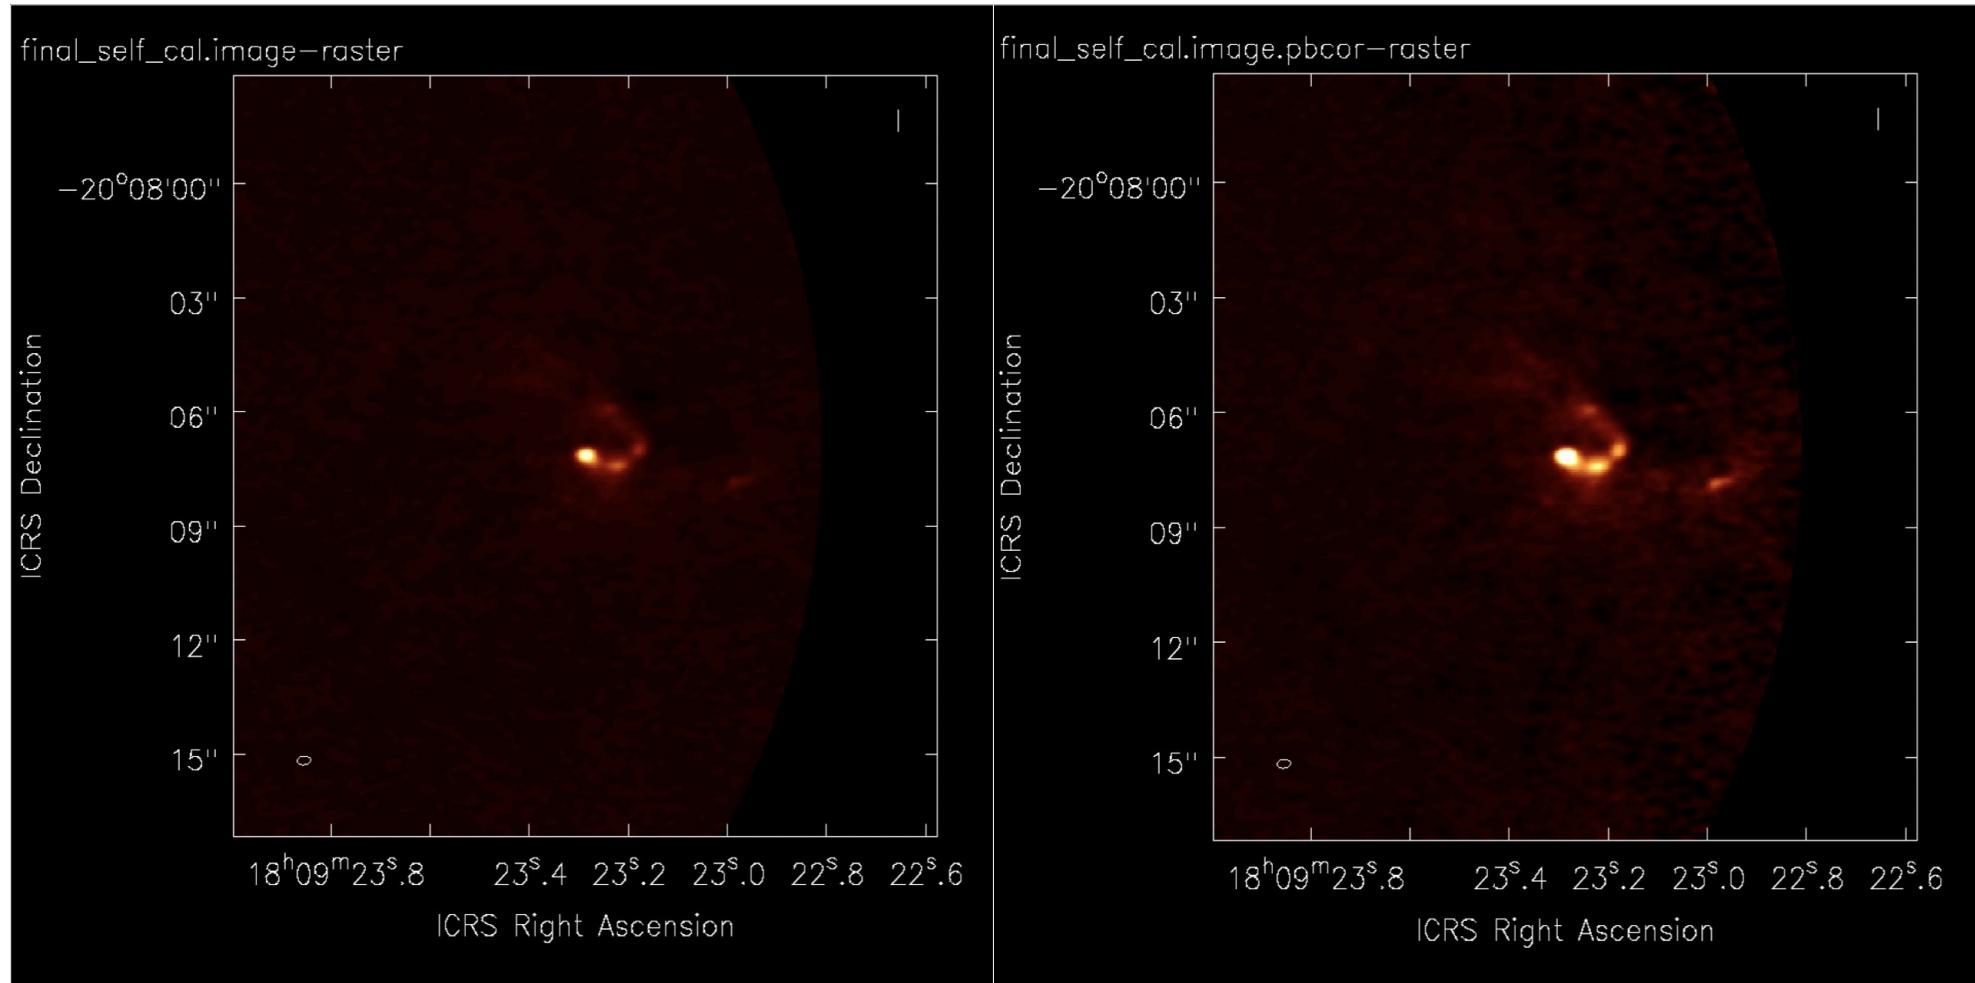

- SPW: 0, 1, 2, 4 (they are line-free spws)
- Phase Calibration: twice (solint inf & 60s)
- Amplitude Calibration: None

# Continuum Self-Calibration: Different Trial

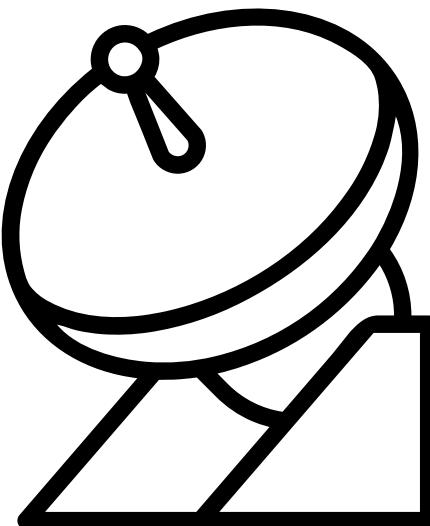

# Effect of Primary Beam Correction

# Q & A

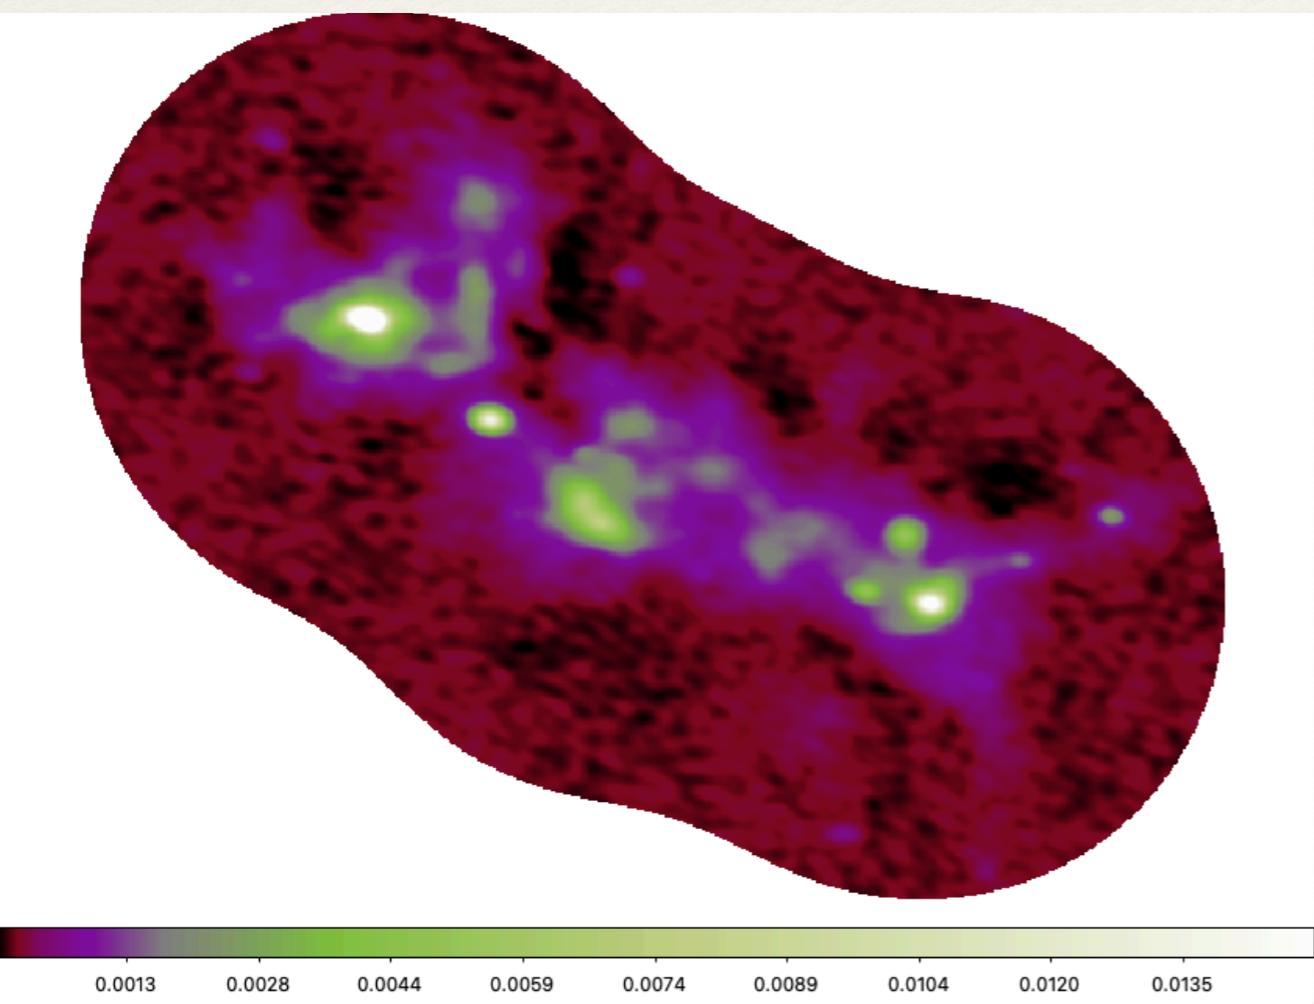

**Thank you!**

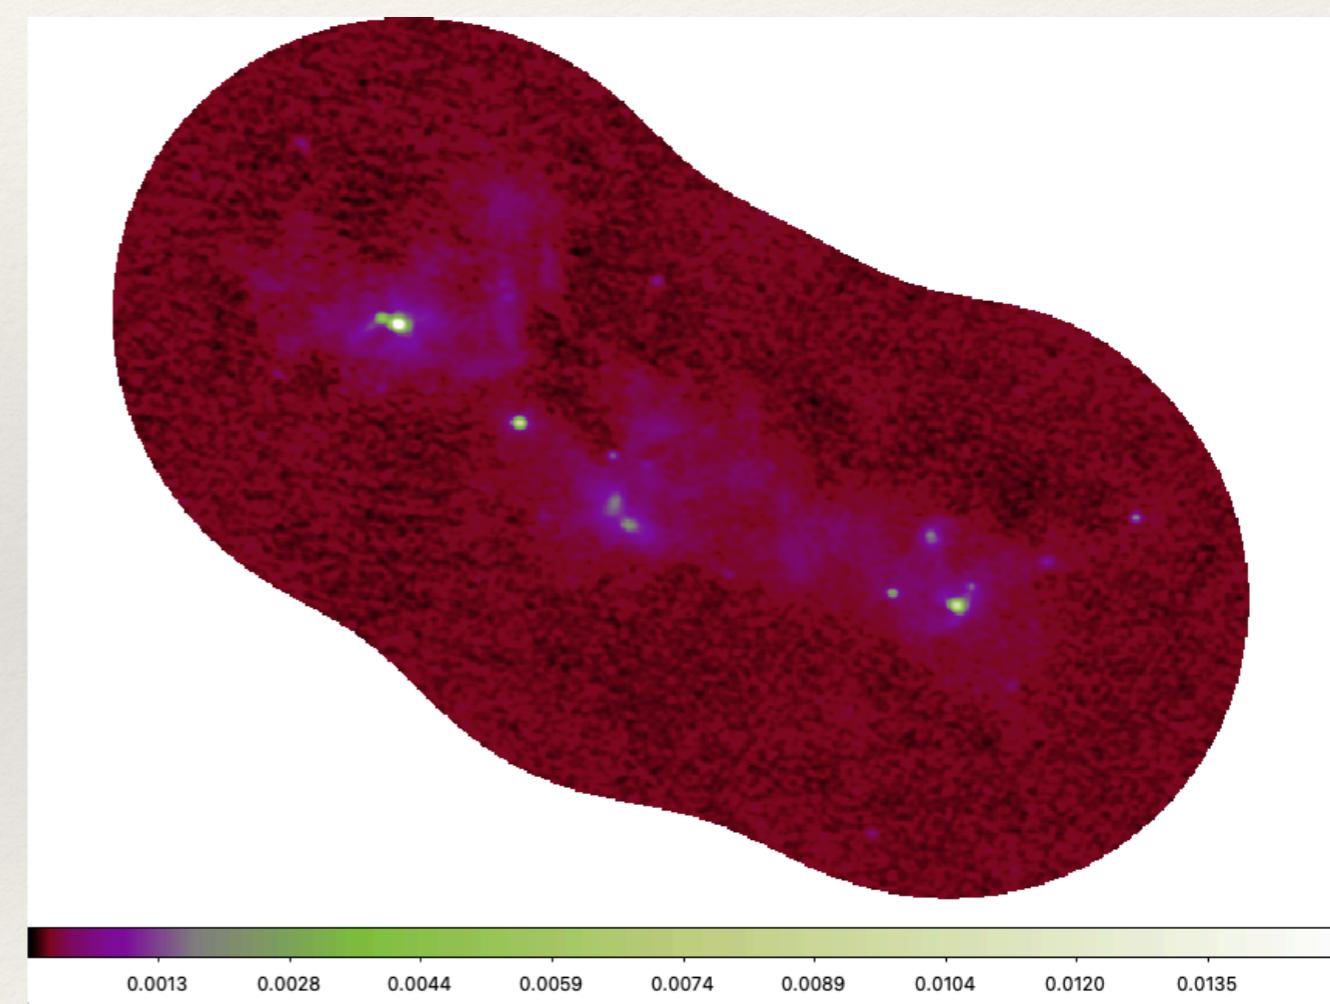

# 12m-array data only

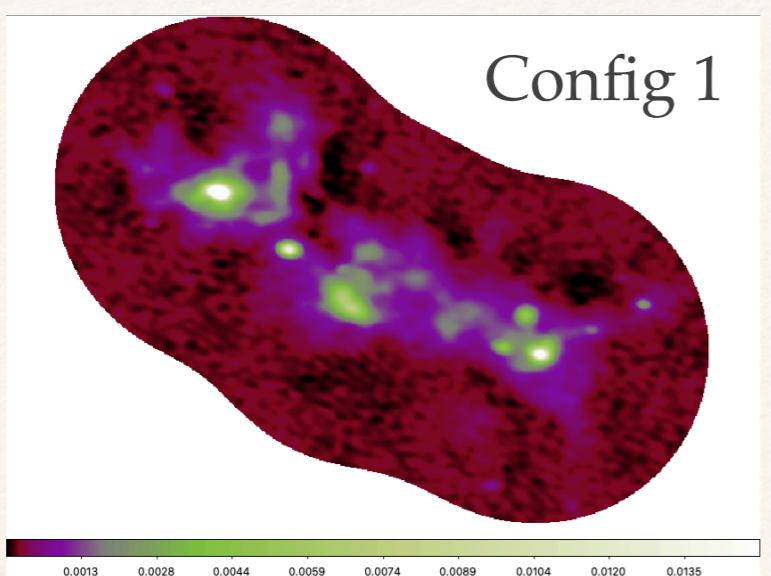

## Stokes I images
